                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated
                                                                                                                                                                                                                                                                                                                                                                                     with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XLIO-Gold (Stratagene) cells and selected for ampicillin resistance."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       5777422
```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The specification describes a polypeptide having heparanase (hpa) activity. The recombinant protein is used as a modulator of heparin-binding growth factors, cellular responses to heparin-binding growth factors and cytokines, cell interaction with plasma lipoproteins, cellular susceptibility to viral, protozoal and bacterial infections or disintegration of neurodegenerative plaques. Heparanase may be useful for conditions such as wound healing, angiogenesis, restenosis, athersclerosis, inflammation, neurodegenerative diseases, and viral infections. Mammalian heparanase can be used to neutralize plasma heparan, and anti-heparanase antibodies may be applied for immunodetection and diagnosis of micrometastases, autoimmune lesions, and renal failure in biopsy specimens, plasma samples, and body fluids. The present sequence encodes human heparanase.

                                                                                                                                The present sequence encodes a human protein with heparanase catalytic activity. The heparanase (hpa) polynucleotide is useful in gene therapy, particularly in treating tumour, inflammation or autoimmunity. Particularly, the polynucleotide is useful in modulating the bioavailability of heparin-binding growth factors, cellular responses to heparin-binding growth factors (e.g. bfg) and cytokines (e.g. interleukin (IL)-8), cell interaction with plasma lipoproteins, cellular susceptibility to certain viral and some bacterial and protozoa infections, or disintegration of neurodegenerative plaques. The polynucleotide is also useful in wound healing (e.g. thermal, chemical or radiation burns), and in the treatment of angiogenesis, restenosis, atherosclerosis, inflammation, neurodegenerative diseases (Gerstmann-straussler Syndrome or Creutzfeldt-Jakob disease), and some viral,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; heparanase; gene therapy; tumour; inflammation; autoin heparin-binding growth factor; cytokine; neurodegenerative plwound healing; infection; burn; angiogenesis; restenosis; atherosclerosis; inflammation; neurodegenerative disease; Gerstmann-Straussler Syndrome; Creutzfeldt-Jakob disease; ds
                                                                                                                                                                                                                                                                                                                                                                                                                                                        New polynucleotides encoding a polypeptide having heparanase activity, useful in wound healing and in gene therapy, particularly in treating tumour, inflammation, autoimmunity, neurodegenerative diseases

                                                                                                                                                                                                                                                                                                                                                                                                                                                     a polynuclectide (I) that encodes a polypeptide with heparanase activity. CC and express recombinant heparanase (II). Heparanase cleaves heparan CC sulphate (HS) at specific intrachain sites, resulting in release of the parin-binding growth factors, enzymes and proteins that are sequestered by HS in basement membranes, extracellular matrix or cell surfaces. It cmay also be implicated in tumour angiogenesis and metastases. (II) is potentially useful in wound healing and for treating angiogenesis, restenosis, atherosclerosis, inflammation, neurodegeneration, viral infection and cystic fibrosis. It can also be used to neutralise heparin CC infection and cystic fibrosis. It can also be used to neutralise heparin CC infection and cystic fibrosis. It can also be used to neutralise heparin CC infection and cystic fibrosis. It can also be used for incometastases, autoimmune deaderection and diagnosis of micrometastases, autoimmune deaderection and diagnosis of in large quantities, in a form that is homogeneously processed and activated/neutralised by a dedicated protease. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
The present invention describes heparanase-specific molecular probes, useful for methods of detecting heparanase in situ. The probes and anti-heparanase antibodies are used to detect or quantify the expression of heparanase, for diagnosis and monitoring of diseases (especially metastasis), for treatment of heparanase-associated diseases (e.g. tumours, (adeno)carcinoma, squamous cell carcinoma, teratocarcinoma, mesothelioma, melanoma, lymphoma or leukemia, a solid cancer (or its metastases) derived from liver, prostate, bladder, breast, ovary, cervix, colon, skin, intestine, stomach, uterus and pancreas, kidney disease, diabetes and inflammation, haemorrhagic nephritis, nephrotic syndrome, sepsis and inflammatory or autoimmune disease), for targeted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (INSI-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; heparanase; hpa; diagnosis; therapy; tumour; cytostatic; antidiabetic; immunomodulatory; anti-inflammatory; nephrotropic; metastasis; adenocarcinoma; squamous cell carcinoma; teratocarci mesochhelioma; melanoma; lymphoma; leukemia; cancer; sepsis; diab inflammation; haemorrhagic nephritis; nephrotic syndrome;

The invention relates to heparanase DNA and protein sequences. The heparanase DNA and protein sequences are useful in wound healing, angiogenesis, restenosis, atherosclerosis, inflammation, pulmonary diseases, neurodegenerative diseases (such as Scrape, Alzheimer's disease, and Creutzfeldt-Jakob disease) or viral infections. The heparanase coding sequence is particularly useful in g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New polynucleotides and polypeptides that are distantly homologous heparanase, useful in wound healing, as well as in gene therapy protocols for angiogenesis, restenosis, atherosclerosis, or

                                                                                                                                                                                 The specification describes a polypeptide having heparanase (hpa) activity. The recombinant protein is used as a modulator of heparin-binding growth factors, cellular responses to heparin-binding growth factors and cytokines, cell interaction with plasma lipoproteins, cellular susceptibility to viral, protozoal and bacterial infections or disintegration of neurodegenerative plaques. Heparanase may be useful for conditions such as wound healing, angiogenesis, restenosis, athersclerosis, inflammation, neurodegenerative diseases, and viral infections. Mammalian heparanase can be used to neutralize plasma heparin, and anti-heparanase antibodies may be applied for immunodetection and diagnosis of micrometastases, aucoimmune lesions, and renal failure in biopsy specimens, plasma samples, and body fluids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cellular response; cytokinė; cell interaction; plasma lipoprotein; cellular susceptibility; infection; disintegration; neurodegenerative plaque; wound healing; angiogenesis; restenosis; athersclerosis; inflammation; neurodegenerative disease; neutralise; plasma heparin; micrometastasis; autoimmune lesion; renal failure;

This invention relates to nucleic acid sequences AAF93744 - AAF93916 CC which encode human secretory or membrane proteins represented by CC AAB88317 - AAB88419. Included in the invention are primers CC AAF93917 - AAF94295 and AAF62232 - AAF62235 which are used to isolate the CC charpast represented of invention. The invention also includes methods for CC the production of antibodies directed against the proteins, and cDNA CC can be used in gene therapy. The polynucleotide sequences and the CC can be used in gene therapy. The polynucleotide sequences are consisted with inappropriate secretory proteins they encode may be used in the prevention, treatment and CC diagnosis of diseases associated with inappropriate secretory protein/membrane protein expression. The nucleic acids and complementary CC sequences may also be used as DNA probes in diagnostic assays (e.g. polymerase chain reactions (PCR)) to detect and quantitate the presence of similar nucleic acid sequences in samples. They may also be used to study the expression and function of secretory proteins/membrane CC polypeptides and their role in metabolism. The polypeptides may be used CC as antigens in the production of antibodies against them and in assays to cidentify modulators (agonists and antagonists may also be used as therapeutic acids and antagonists may also be used as therapeutic acids and antagonists may also be used as therapeutic acids and antagonists may also be used as therapeutic acids and antagonists may also be used as therapeutic acids and antagonists may also be used as therapeutic acids and antagonists may also be used as therapeutic acids and antagonists may also be used as therapeutic acids and antagonists may also be used as therapeutic acids and antagonists may also be used as therapeutic acids and antagonists may also be used as therapeutic acids and antagonists may also be used as therapeutic acids and antagonists may also be used as therapeutic acids and antagonists may also be used as therapeutic acids and antagonists may also 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                08-JUL-1999;
